

Cornell Hack4Impact

Annual Report 2025

A LETTER FROM THE CODIRECTORS

Afran Ahmed, Co-Director
Class of 2026 Information Science

Mohammed Kane, Co-Director
**Class of 2026 Operations Research and
Information Engineering**

This year's Annual Report marks another meaningful step in Hack4Impact's journey, marked by the collaboration, creativity, and purpose of the team. Our mission to build technology for social good continues to guide everything we do, from the projects we develop to the communities we uplift. None of this would be possible without the continued support of those who believe in our vision. To our readers, partners, and members, we are deeply grateful for your role in helping Cornell Hack4Impact grow into the thriving, impact-driven organization it is today.

This year, we've had tremendous success working on 8 projects with our nonprofit partners across a breadth of socially impactful spaces such as healthcare, food insecurity, and financial literacy. We have deployed our projects with Ithaca Community Recovery and Greenzone and are expecting to complete our solution for Alaska Children's Trust. We have additionally launched our first MVP for our internal product CHEM (the Cornell Hack4Impact Endowment Manager), which we have officially branded as OdesseyFund.

Beyond our project work, we've welcomed and integrated dozens of new members to our organization, all united under our desire to create tangible, social impact. At Hack4Impact, our greatest value is building an inclusive space where everyone has the opportunity to learn and build in collaboration with each other. Beyond the context of project work, we've witnessed how this space we have curated has allowed for friendships to blossom and grow outside of it, too.

At an organizational level, we've expanded our outreach, executing on several events in conjunction with other organizations, and we've connected with a record number of prospective nonprofit partners, sponsorship opportunities, and of course, our wonderful alumni! Going forward, we look forward to continuing to collaborate with impactful nonprofits across the globe, and increasing our impact towards our members, community, and people alike.

Mohammed Kane

To empower engineers, designers, activists, and humanitarians to create lasting and impactful social change, fostering the wider adoption of software as a tool for social good.

OUR MISSION

Hack4Impact exists for both nonprofits and students. We connect student software developers with nonprofits and socially responsible organizations to develop powerful new tools for social change to help further their mission. We are committed to increasing awareness of technology's potential for good through talks and workshops.

scenarios

OUR PROCESS

At Hack4Impact, we understand that developing meaningful resources for and collaborations with our nonprofit partners takes time and intention. Our collaborations are typically 1-2 semesters long (4-12 months), and we work with our partners to ensure that we create a solution that suits the organization's needs.

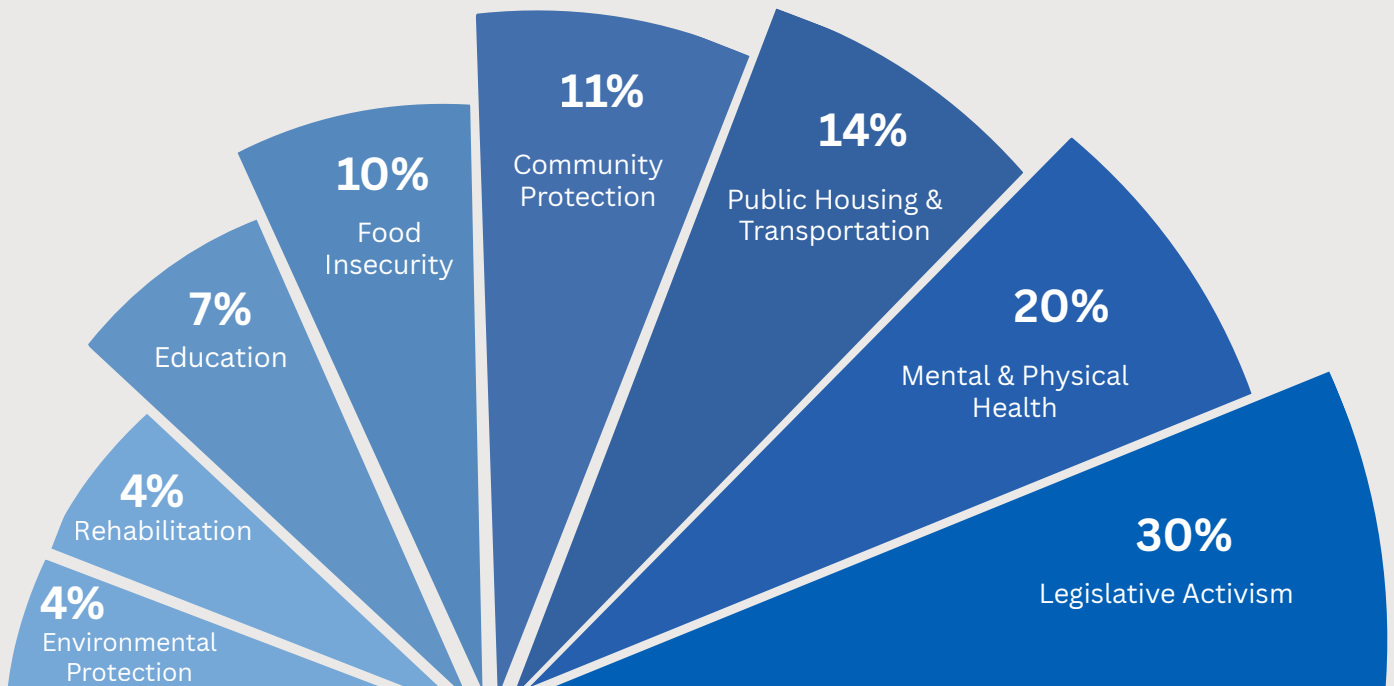

OUR NONPROFIT PARTNERS

From housing inequality to preventing child abuse, we have worked with non-profits spanning 9 impact areas.

IMPACT AREAS

This year's projects highlight our growing focus on advocacy, health, and community-centered innovation. Nearly one-third of our collaborations advanced legislative or policy-driven change, while others tackled public health, food insecurity, and housing access. These diverse efforts showcase how Hack4Impact channels student talent into tangible progress across social and civic sectors.

OUR 2025 PROJECTS

This year, our team challenged itself to tackle projects of wider scope, addressing social issues from education to food equity. The following pages highlight each project's progress and tangible impact towards forwarding each client's mission.

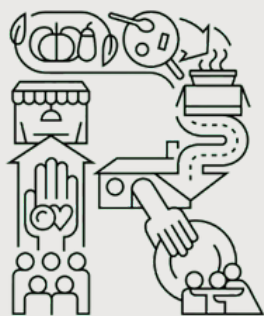

Alaska Children's Trust (ACT) is a statewide nonprofit dedicated to preventing child abuse and neglect by supporting programs that strengthen families and communities. H4I is developing a mobile application, digitizing their most requested resource, the ACT Safety Deck. The app features interactive card-flipping to help children, parents, and educators effectively engage with the content. This is H4I's second semester on the project, and we aim to deploy the app by the end of this semester.

The Internal Member Archive (IMA) is a platform designed to help Hack4Impact members stay connected by organizing and displaying past members' contact information and career paths. This year, the IMA team enhanced the platform by building upon last year's MERN-based foundation and developing the frontend. We conducted user interviews and developed stronger search and filtering features; we are currently wrapping up the frontend portion of this project.

Cornell Hack4Impact Endowment Manager is an open-source tool we are building in collaboration with Cornell alum David Strip to assist non-profits and smaller organizations with managing endowments through a streamlined platform. This is the project's 4th semester, and we are wrapping up development and deployment of our MVP, along with finalizing designs and completing user testing. As an internal project, we are also continuing to iterate on new ideas such as directly importing transactions from CSV files to further streamline endowment management.

**Rethink
Food**

Rethink Food is a nonprofit that partners with restaurants, kitchens, and community-based organizations (CBOs) to increase food security and reduce waste. Rethink Food strengthens local food ecosystems, connecting restaurant partners with CBOs and delivering measurable impact at the neighborhood level. We're building a map-based web app that visualizes the flow of meals from restaurant partners to CBOs across NYC. The tool replaces scattered Google Sheets with a Postgres backend and features a donor-friendly, interactive interface with search capabilities, filters, impact overlays, and baseline comparisons to highlight gaps.

MedSimAI empowers medical students to enhance their communication skills by engaging with AI-driven virtual patients in realistic clinical scenarios. By simulating authentic patient interactions and providing personalized feedback, the platform helps students gain confidence in their patient communication abilities to become more experienced doctors. We are developing a new electronic health record and an interactive quiz feature, providing students with an interface that lets them view reports all in one place and test themselves to evaluate their progress.

MedExplain Health is dedicated to promoting health equity by providing accessible, easy-to-understand health information that empowers patients to make informed decisions about their care. However, their current website is not mobile-friendly, making it difficult for users to access resources on the go, and their article management system is inefficient for administrators. This semester, we're building a mobile-responsive site and an internal dashboard to streamline article updates, making MedExplain's content more accessible to patients.

OUR PARTNERS

Our partners are central to the work that we do. Their passion and dedication to their respective causes inspire us to design meaningful and human-centered solutions.

The next few pages highlight what some of our partners have to say about working with Hack4impact.

At Alaska Children's Trust, we envision a future where all Alaska children are safe and healthy. Starting conversations early and having them often is the best thing you can do to keep your child safe online, but it can be a hard subject to broach. Our Online Safety Conversation Cards give parents a tool to make this

easier, and working with Claire, Ashlie and the entire Hack4Impact Cornell team to turn our physical cards into an online app has been a wonderful collaboration. Ashlie and Claire have been great leaders, thoroughly professional and patient in all their communications. We have had the pleasure to meet with the entire development team, and share a little about Alaska Children's Trust mission with them, as we, in turn, learned new things about the world of coding and design. We are so excited to see our ideas come to life in the form of an online tool that will help families talk about safety and strengthen child abuse prevention efforts across Alaska, and, who knows, maybe even beyond? - Addy Peters, Alaska Children's Trust

The team's project is filling an important void for the non-profit community by providing tools to manage endowments. They have gone beyond the original request and are developing a donor management system. I am impressed by the professionalism of the team and their ability to grasp complicated concepts as indicated by the suggestions they've come up with to expand the reach of the project.

- David Strip, Odyssey

The rapid progress on our new interactive program map is a testament to the exceptional capabilities of the Hack4Impact Cornell team.

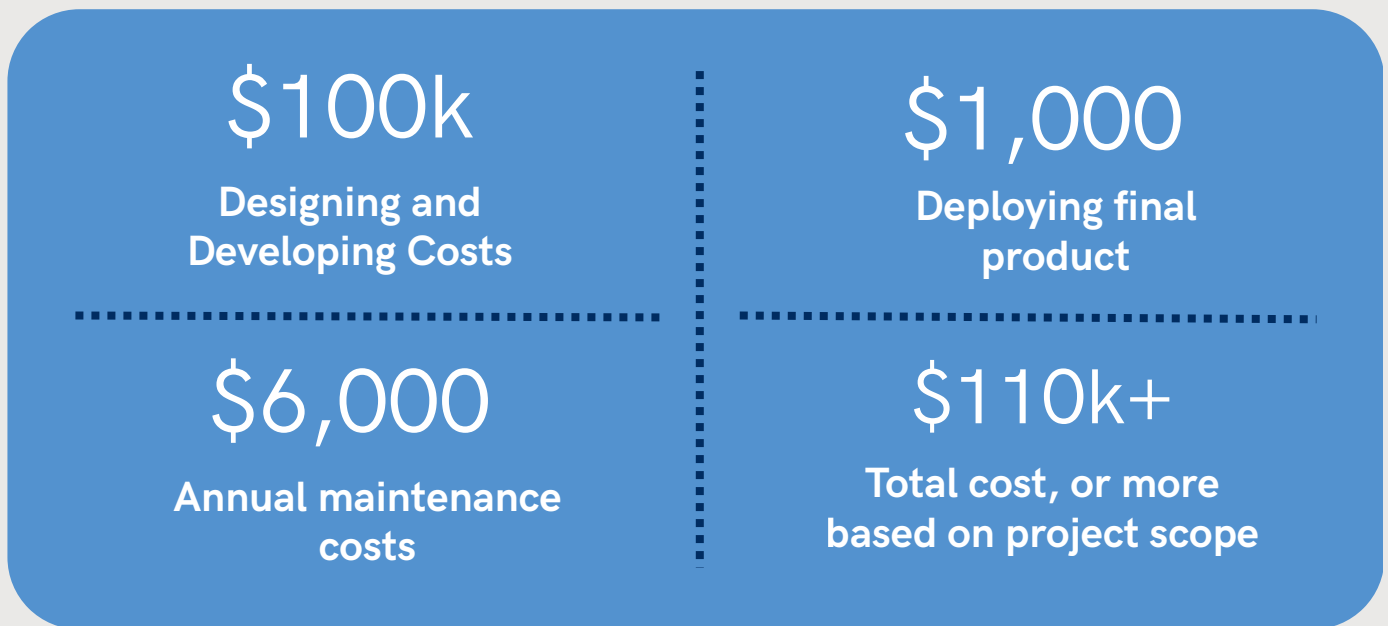

In a matter of weeks, their blend of creativity, resourcefulness, and seamless communication has all contributed to the creation of this critical tool, designed to engage our supporters and drive program growth.

-Will Fleming, Rethink Food

OUR PURPOSE

Nonprofits often do not have the financial means necessary to build robust, customized web-based products. Hack4Impact alleviates this financial burden by providing pro-bono services, working directly with our partners to ensure high-quality and user-centered web solutions.

The Cost of Alternatives

Our Contributions

This year, Cornell Hack4Impact has worked with **5 nonprofit partners**, saving our partners an estimated **\$550,000** in development costs. With our help, our partners will have access to tools essential to spreading their mission and effectively focusing their efforts on advancing their respective initiatives. In building connections with our partners, we ensure that resources are distributed to those who need them most.

SEMESTER SHOWCASE

Our hard work culminates in a semesterly showcase, where each subteam maps their project from its ideation to implementation stages, answering questions, and providing insights about designing solutions tailored to creating social impact. Our semester showcase illustrates how excited both Hack4Impact and the broader Cornell community are to leverage technology to foster innovative social change.

If you are curious to hear how our team makes an impact, we invite you to join us for our semester showcase semester to hear from our team members first hand. Together, we can build an even bigger community, learning together how to imagine new tech-driven social solutions.

HACK HAPPENINGS

At the heart of Hack4Impact is our value for fostering meaningful relationships, not only with nonprofit partners, but within our team as well. Whether it be through our mentor-mentee program or post-work session dinners, our members learn from each other, growing as professionals and as people. More than just a project team, we have built a family where everyone can challenge themselves while having each other to fall back on.

"In my five semesters at Hack, I've had the privilege to design for environmental justice, nonprofit financial management, and medical equity platforms while working alongside amazing teammates. I'm grateful to have the opportunity to grow as a designer at the intersection of technology and social impact, creating products that make real change in the world."

-Sonia M.

IN THEIR OWN WORDS

"In the tech space at Cornell, there's a real need to find something that does good, and Hack fills that niche by letting you build tech while giving back. Hearing that my presence inspires others and makes Hack feel inclusive means everything. No work can be done on your own; we can only accomplish something if we do it together. I'm glad I get to be someone who helps others feel that and join the cause."

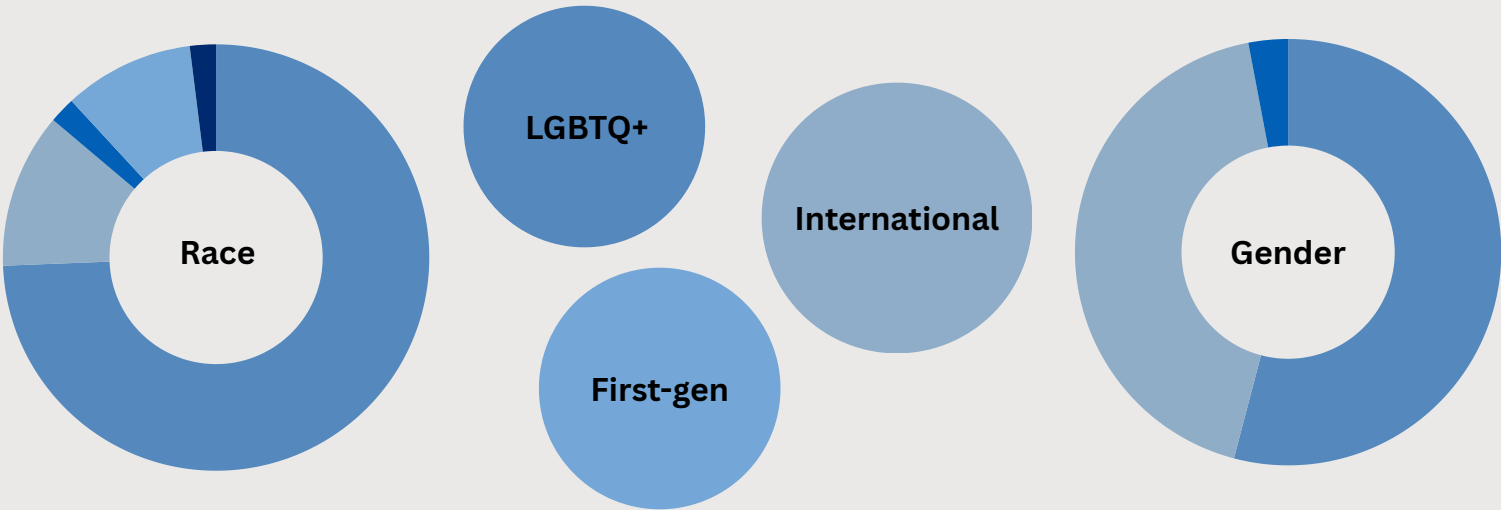

-Tuni L.

OUR ALUMNI PLACEMENTS

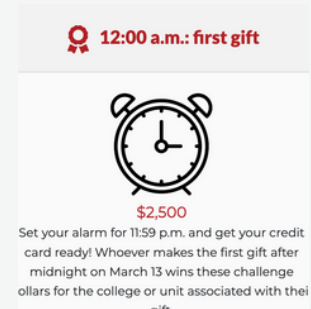

Our Alumni continue to carry their passion for impact and innovation, working in a vast network of industries and organizations.

RECOGNIZING OUR PROGRESS

Fundraising

We expanded our fundraising efforts this year, raising \$1.3K through Crowdfunding and \$8K on Giving Day. These contributions strengthen our ability to build meaningful, community-oriented tech solutions.

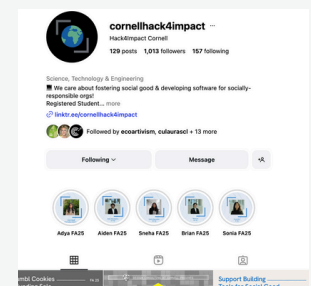

Project Status

Across 2025, we developed eight projects, with four—Greenzone, Ithaca Community Recovery, Rethink Food NYC, and Odyssey—successfully moving into their handoff phase. Each project reflects our commitment to impact-driven partnerships and sustainable, long-term solutions.

Marketing

Our marketing reach grew significantly, with 48K views on posts and reels this month alone and an average of 32.8K views across our content. With 45% of engagement from non-followers & 180+ new followers this semester, we continue to reach new audiences.

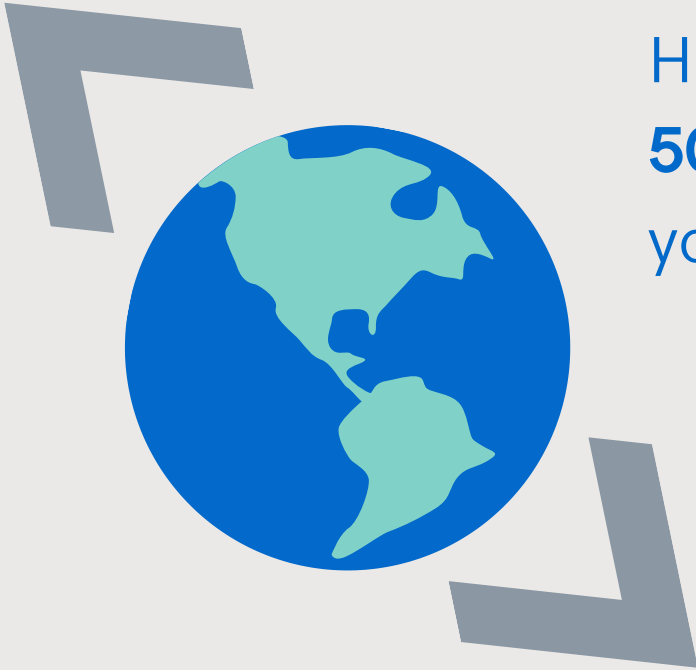

Full Team Updates

Our team now includes 81 members, with 30 new recruits spanning both freshmen and upperclassmen. We remain committed to bringing in fresh talent, cultivating mentorship, and advancing our mission of using technology for social good.
